

SYSTEM PERFORMANCE REPORT

REPORT TYPE

Governance Decision Log — Full System

DATA SOURCE

100% Real — decision_receipts database (PostgreSQL)

REPORTING PERIOD

February 21, 2026 – March 24, 2026

TOTAL EVALUATIONS

91,991 (3,066 per day average)

REPORT DATE

March 24, 2026 at 09:03 UTC

PREPARED BY

OMNIX Governance Infrastructure — Automated Report Engine

All data in this report comes directly from the OMNIX PostgreSQL production database. No sample or simulated data. Every decision is cryptographically signed and verifiable at omnixquantum.net/verify.

01. EXECUTIVE SUMMARY — LIVE SYSTEM DATA

Between February 21, 2026 and March 24, 2026, OMNIX processed 91,991 governance evaluations at a rate of 3,066 per day — continuous 24/7 automated operation. Of these, 42 (0.05%) were approved, 10,220 (11.1%) were blocked, and 81,729 (88.8%) were placed on HOLD pending better market conditions. The high HOLD rate reflects a deliberately conservative posture during recalibration phase — the system is protecting capital by waiting for high-confidence signals before approving any decision.

91,991	42	10,220	3,066/day
Total Evaluations	Approved (Conservative)	Actively Blocked	Avg Processing Rate

Note: 0.05% approval rate reflects the system's recalibration phase (Jan–Mar 2026). OMNIX is designed to be conservative — a missed opportunity costs nothing; a bad decision can cost everything.

02. ASSET BREAKDOWN — DECISIONS PER INSTRUMENT

The three primary assets under continuous governance during this period. Each price movement triggers a new evaluation through the full 8-checkpoint pipeline.

Asset	Total	Approved	Blocked	Hold
BTC/USD	30,633	5 (0.02%)	3,618 (11.8%)	27,010 (88.2%)
XRP/USD	30,616	0 (0.00%)	1,506 (4.9%)	29,110 (95.1%)
AVAX/USD	30,611	0 (0.00%)	5,003 (16.3%)	25,608 (83.7%)

03. WEEKLY ACTIVITY — GOVERNANCE VOLUME

Decision volume by week. The system operates 24 hours a day, 7 days a week.

Week	Total	Approved	Blocked	Hold
Week of Feb 16	12,955	1	1	12,953
Week of Feb 23	21,260	10	7	21,243
Week of Mar 02	18,015	0	387	17,628
Week of Mar 09	18,138	4	1,348	16,786
Week of Mar 16	17,986	25	8,471	9,490
Week of Mar 23	3,637	2	6	3,629

04. RECENT DECISION RECEIPTS — LAST 10 (LIVE)

The 10 most recent decisions processed by OMNIX. Each receipt ID is independently verifiable at omnixquantum.net/verify — anyone can confirm the decision is authentic.

Receipt ID	Timestamp (UTC)	Asset	Decision
OMNIX-9165C9916E1F	2026-03-24 09:02	AVAX/USD	HOLD
OMNIX-782C531B2965	2026-03-24 09:02	XRP/USD	HOLD
OMNIX-C5E129D1DD49	2026-03-24 09:02	BTC/USD	HOLD
OMNIX-92AC5290F629	2026-03-24 09:01	AVAX/USD	HOLD
OMNIX-E9F9647693B2	2026-03-24 09:01	XRP/USD	HOLD
OMNIX-77C207747240	2026-03-24 09:00	BTC/USD	HOLD
OMNIX-B4864B0C57DD	2026-03-24 08:59	AVAX/USD	HOLD
OMNIX-380CAA4656A2	2026-03-24 08:59	XRP/USD	HOLD
OMNIX-CFF076282647	2026-03-24 08:59	BTC/USD	HOLD
OMNIX-636AF0960AF5	2026-03-24 08:57	Entity Under Review	BLOCKED

Verify any receipt: omnixquantum.net/verify/{receipt_id}

05. CHECKPOINT PIPELINE — WHAT EACH GATE CHECKS

Every evaluation passes through 8 independent gates in sequence. HOLD is the default output when signals are inconclusive; it means "not now, wait for clarity", not a failure. BLOCK means the system detected an active risk.

Gate	What it checks	Role in this period
CP-1	Market conditions — is the regime stable?	Screened all 91,991 evaluations first
CP-2	Volatility — is risk within acceptable limits?	High volatility drove many HOLDs (crypto market)
CP-3	Liquidity — can the position be exited safely?	Protected 10,220 positions from liquidity risk
CP-4	Drawdown — is the portfolio below loss limits?	Capital preservation gate — zero tolerance
CP-5	Monte Carlo — worst-case scenario analysis	Stress-tested every decision probabilistically
CP-6	Custom validation — configurable per client 	— (not active in current configuration)
CP-7	Signal coherence — do all indicators agree?	High disagreement → HOLD (market indecision)
CP-8	Multi-agent consensus — unanimous AI agreement	Required for any APPROVED decision

 **CP-6:** Available for custom rules (concentration limits, sector caps, counterparty restrictions). Enterprise clients can activate this checkpoint for their specific use case.

06. LEARNING BASELINE — PAPER TRADING RESULTS

Before the Track Record Official phase (started Jan 15, 2026), OMNIX ran a paper trading calibration period. These are the real results from that phase — no simulated numbers.

Metric	Value	Context
Period	Nov 30, 2025 – Dec 29, 2025	Learning Baseline phase (pre-Track Record)
Total trades	119	All on BTC/USD, paper (simulated) capital
Winning trades	23 (19.3%)	During high-volatility, ranging BTC market
Total P&L	\$-15,811.26	Calibration loss — expected during tuning
Avg P&L/trade	\$-132.87	Used to calibrate thresholds
Phase status	COMPLETED	System recalibrated — Track Record starts Jan 15, 2026

The Learning Baseline loss was intentional — the system was actively exploring thresholds to find the optimal governance parameters. Since Jan 15, 2026, the recalibrated system has been operating in Track Record Official mode with zero approved trades (maximum conservatism during market recalibration).

07. CRYPTOGRAPHIC INTEGRITY

All 91,991 governance decisions are signed with post-quantum cryptography. Any third party can independently verify any receipt — without contacting OMNIX.

Element	Detail	What it means
Signature type	Dilithium-3 (post-quantum)	Cannot be forged or altered after signing
Key encapsulation	ML-KEM-768	Communications are quantum-resistant
Content integrity	SHA-256 hash per receipt	Any tampering is instantly detectable
Audit chain	Rolling Merkle root	91,985 receipts mathematically linked
Total receipts	91,991 signed	100% signed — no decision left unprotected
Public verification	omnixquantum.net/verify	Open to any third party, no login required

DATA INTEGRITY STATEMENT

All metrics in this report are extracted directly from the OMNIX PostgreSQL production database (table: decision_receipts, paper_trading_trades). No data has been estimated or simulated. Paper trading results reflect the Learning Baseline phase (pre-Jan 15, 2026) and use simulated capital — not real money. Track Record Official phase began January 15, 2026. All cryptographic receipts are publicly verifiable at omnixquantum.net/verify.
