

OMNIX QUANTUM LTD

IP Mediation Submission — Intellectual Property Office (UK)

Prepared by: Harold Alberto Nunes Rodelo | omnixquantum.net | April 2026

CONFIDENTIAL — FOR MEDIATION PURPOSES ONLY

1. Parties to the Dispute

	Claimant (Submitting Party)	Opposing Party
Name	Harold Alberto Nunes Rodelo	Mushtaque Ahmed Rajput
Entity	OMNIX QUANTUM LTD (UK)	VITT (unregistered label)
Website	omnixquantum.net	Not publicly available
Country	United Kingdom	Unspecified
Contact	contacto@omnixquantum.net	LinkedIn (only channel used)

2. Nature of the Dispute

The opposing party (Mushtaque Ahmed Rajput, operating under the label 'VITT') has made public accusations via LinkedIn (April 19, 2026) alleging that OMNIX QUANTUM LTD incorporated his intellectual property — specifically a methodology he refers to as 'VITT logic' and 'Forensic Invariance' — without authorisation or attribution.

The submitting party categorically disputes these claims. OMNIX is an independently created decision governance infrastructure, developed from July 2025 onward, with no technical dependency on any material originating from the opposing party.

3. Technical Definition — What is 'VITT'?

A critical threshold issue in this dispute is the absence of any verifiable technical definition of 'VITT.' The submitting party has conducted a comprehensive review and confirms the following:

- No public code repository, algorithm, or specification for 'VITT' exists.
- No academic paper, patent filing, or registered copyright for 'VITT' has been identified.
- No technical documentation describing the architecture, logic, or implementation of 'VITT' has been shared with OMNIX QUANTUM LTD at any point.
- The opposing party has not provided any verifiable artefact that constitutes 'VITT' intellectual property.

OMNIX QUANTUM LTD

IP Mediation Submission — Intellectual Property Office (UK)

Prepared by: Harold Alberto Nunes Rodelo | omnixquantum.net | April 2026

CONFIDENTIAL — FOR MEDIATION PURPOSES ONLY

Formal statement: There exists no definition of 'VITT logic' or 'Forensic Invariance' in any form — code, algorithm, or document — that was incorporated into OMNIX. Without a defined, documented, and independently verifiable artefact, no IP ownership claim can be substantiated.

4. Architectural Comparison — OMNIX vs VITT

The following table demonstrates the structural and conceptual distinction between OMNIX and any claimed 'VITT' methodology:

Dimension	OMNIX QUANTUM	VITT (as claimed)
Architecture	11-checkpoint governance pipeline	Not publicly defined
Core function	Decision traceability + institutional accountability	Claimed: forensic invariance
Codebase	Documented in Git since July 13, 2025	No public repository exists
IP registration	10 provisional patent applications (USPTO)	No filing identified
Technical artefacts	Python, TypeScript, PostgreSQL, Flask, React	None provided or accessible
Forensic simulation	OMNIX Forensic Simulation (commit 08879d68, March 13, 2026)	Not independently created
Origin	Independent creation by Harold A. Nunes Rodelo	Unverified claim by opposing party

These systems are not the same. OMNIX and VITT do not share architecture, codebase, methodology, or implementation. They are conceptually distinct, and any claim of overlap is not supported by any verifiable technical evidence.

5. Verified Git Evidence Timeline

All OMNIX source code is maintained in a version-controlled Git repository. The following commits are independently verifiable using standard cryptographic hashing (SHA-1). Each hash uniquely identifies a specific state of the codebase at a specific point in time.

Date	Commit Hash	Significance
13 Jul 2025	4b9ab293	OMNIX repository created — first commit. Predates any interaction with opposing party by 8+ months.

OMNIX QUANTUM LTD

Prepared by: Harold Alberto Nunes Rodelo | omnixquantum.net | April 2026

CONFIDENTIAL — FOR MEDIATION PURPOSES ONLY

13 Mar 2026	08879d68	LUNA/OMNIX Forensic Simulation created exclusively by Harold Nunes Rodelo. File header reads 'OMNIX
18 Mar 2026	ceca9500	VITT label removed from internal notes. First and only appearance of VITT in git — as a deletion.
10 Apr 2026	dc927867	All remaining VITT references removed. VITT never appears in any addition commit — only in removal com
19 Apr 2026	Current	Live site omnixquantum.net verified clean of all VITT references (grep confirmed).

6. Six Independently Verifiable Facts

Fact 1 — OMNIX predates VITT by 8+ months

The OMNIX repository was initialised on 13 July 2025 (commit 4b9ab293). The opposing party's accusations were first received on 19 April 2026. No prior formal communication, collaboration agreement, or IP transfer document exists between the parties.

Fact 2 — VITT was never added, only removed

A complete search of the OMNIX git log reveals that the string 'VITT' appears exclusively in deletion commits (ceca9500 on 18 March 2026; dc927867 on 10 April 2026). VITT was never committed as part of any functional code, architectural document, or specification.

Fact 3 — Forensic simulation is original OMNIX work

Commit 08879d68 (13 March 2026) created the LUNA forensic simulation. The file header explicitly reads 'OMNIX Forensic Simulation.' Author: madridpep3 (Harold Nunes Rodelo). No VITT attribution, no VITT logic, no VITT reference anywhere in that file.

Fact 4 — No VITT technical artefact was ever received

The opposing party has not provided — and OMNIX QUANTUM LTD has never received — any code, algorithm, dataset, specification, or documented methodology constituting 'VITT intellectual property.' No IP transfer occurred because no IP was ever shared in technical form.

Fact 5 — Live site is clean

As of 19 April 2026, omnixquantum.net contains zero references to VITT, Mushtaque Ahmed Rajput, or any claimed methodology. This was independently verified via grep across the full codebase.

Fact 6 — OMNIX architecture is original and patented

OMNIX QUANTUM LTD

IP Mediation Submission — Intellectual Property Office (UK)

Prepared by: Harold Alberto Nunes Rodelo | omnixquantum.net | April 2026

CONFIDENTIAL — FOR MEDIATION PURPOSES ONLY

OMNIX has filed 10 provisional patent applications with the USPTO (Micro Entity, April 2026) covering its 11-checkpoint governance pipeline, TIE scoring, forensic simulation framework, and institutional decision infrastructure. These filings establish prior art entirely independent of any VITT claim.

7. Outcome Sought

The submitting party requests that mediation result in the following:

- A formal acknowledgement that OMNIX QUANTUM LTD independently created the OMNIX architecture, codebase, and forensic simulation framework.
- A written statement from the opposing party retracting the public IP theft accusations made via LinkedIn on 19 April 2026.
- Cessation of all further public or private claims asserting VITT ownership over any component of OMNIX.
- Confirmation that no further escalation (investor contact, public statements, regulatory complaints) will be pursued based on these unsubstantiated claims.

8. Closing Statement

OMNIX QUANTUM LTD approaches this mediation in good faith and with full transparency. Every claim made in this submission is supported by independently verifiable, cryptographically timestamped evidence. No assertion in this document relies on subjective recollection or undocumented memory.

The opposing party's accusations are not supported by any verifiable technical evidence. No VITT artefact was received, incorporated, or derived from. The OMNIX architecture is entirely original, built from first principles, and its development timeline is immutably recorded in version control.

All evidence presented is independently verifiable. OMNIX architecture is original, documented, and predates any interaction with the opposing party. OMNIX QUANTUM LTD is fully prepared to submit the complete Git repository, file-level diffs, and patent application records to any independent forensic review.
