Prepared by: Harold Alberto Nunes Rodelo

OMNIX QUANTUM LTD — United Kingdom

CONFIDENTIAL — SUBMITTED UNDER UK IPO MEDIATION PROCESS This document contains 83 screenshots capturing the complete LinkedIn message exchange between the parties, organised in 8 chronological sections. All screenshots are originals from Harold Nunes' LinkedIn account and have not been altered. Timestamp metadata is preserved in filenames.

TABLE OF CONTENTS

SECTION 1 — INITIAL CONTACT (March 13, 2026) (5 screenshots)

SECTION 2 — EXPLORATORY TECHNICAL DISCUSSION (March 13–14, 2026) (38 screenshots)

SECTION 3 — HAROLD ASSERTS INDEPENDENCE / MUSHTAQUE AGREES (March 15, 2026) (1 screenshot)

SECTION 4 — CORDIAL EXCHANGE / PITCH PREPARATION (March 21–22, 2026) (1 screenshot)

SECTION 5 — MUSHTAQUE DEMANDS IP CONFIRMATION / HAROLD DECLINES (March 24–25, 2026) (7 screenshots)

SECTION 6 — TERRA/LUNA SIMULATION DISPUTE (March 25, late night, 2026) (4 screenshots)

SECTION 7 — ESCALATION TO LEGAL THREATS & FINANCIAL DEMANDS (April 10, 2026) (21 screenshots)

SECTION 8 — HAROLD'S FINAL STATEMENT & CONTINUED HARASSMENT (April 10–19, 2026) (6 screenshots)

Total screenshots: 83

1. Mushtaque Ahmed Rajput **initiated all contact unsolicited** on March 13, 2026. 2. Harold Nunes **never agreed** to any integration, partnership, or IP licensing. 3. On March 15, Mushtaque **voluntarily removed** all public OMNIX references and wrote 'I'm glad we're on the same page.' 4. On March 24, Mushtaque tried to create an **IP confirmation record** before Harold's investment pitch. Harold declined. 5. On March 25, Mushtaque **accepted Harold's position in writing**. 6. On April 10, Mushtaque **escalated to financial demands**: retroactive fees, equity, and threats to freeze investment funds. 7. Harold referred all matters to **legal representatives** and warned of defamation/harassment action. 8. **No signed agreement, licensing contract, or IP transfer** exists in any form.

1. SECTION 1 — INITIAL CONTACT (March 13, 2026)

Mushtaque Ahmed Rajput initiates unsolicited contact with Harold Nunes, sending VITT protocol documents and proposing a Terra/LUNA collapse forensic simulation. Harold responds with interest as a professional exchange — no agreement, no partnership, no IP transfer.

Mediation Enquiry — IP Ownership Dispute Borrador guardado a las 11:39

OMNIX_IPO_MEDIATION_SU... 11 KB

Dear IPO Mediation Team,

I would like to enquire about using your mediation service for an intellectual property dispute involving ownership and copyright claims over independently created software and forensic simulation reports.

Could you please advise whether my case is suitable for your service and what the next steps would be?

I have prepared a full submission document which I can attach upon request.

Thank you.

Harold Alberto Nunes Rodelo

2. SECTION 2 — EXPLORATORY TECHNICAL DISCUSSION (March 13–14, 2026)

Both parties discuss technical concepts. Harold clarifies that OMNIX already possesses equivalent architectural components independently. The discussion is framed as two parallel systems, not a joint venture or integration. No formal agreement is proposed or accepted.

Subject: Technical Brief: Integrating Forensic Invariance with Operational Governance (VITT & OMNIX).
Hi Harold,

Following up on our insightful exchange regarding the Execution Boundary, I am sharing a technical report that serves as a foundational pillar for the

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

Mobile • 1m ago

report that serves as a foundational pillar for the architectural certainty we discussed.

This paper, titled "The Forensic Vault" (الخزنة الجنائية), co-authored with Ahmed Alsaadi, deep-dives into the mechanics of Logical Decay, the structural vulnerability that occurs when autonomous systems prioritize pragmatic output over protocol integrity.

Why this is critical for the OMNIX framework:

From Policy to Infrastructure: While most governance remains linguistic, this report details a transition toward Technical Enforcement. It introduces the Forensic Vault, a mechanism designed to interrogate the 'decision logic' of a system in real-time.

Chain of Custody for Logic: In the context of capital preservation and digital assets, any irreversible action

Write a message...

Send

Mushtaque Ahmed Rajput

● Active now

preservation and digital assets, any irreversible action must have a verifiable sourcing of intent. The report outlines how we can maintain an immutable 'Chain of Custody' for the reasoning process itself.

Reverse Interrogation Protocol: We've documented how to detect 'Identity Confusion' and 'Manufactured Confidence', risks that OMNIX can preemptively block once identified by VITT's forensic benchmarks.

Audit-Grade Determinism: To achieve the 'Citadel of Trust', the execution layer needs the analytical depth provided by these non-manipulatable forensic logs.

I believe the synergy between your Execution Control Layer and our Forensic Invariance Benchmarks provides the first complete blueprint for a truly Sovereign AI Infrastructure.

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

Sovereign AI Intrastructure.

I look forward to your thoughts on the 'Reverse Interrogation' methodology and how we might evolve these ideas into operational standards.

Best regards,
Mushtaque Ahmed Rajput

environments where autonomous systems may trigger irreversible actions.

The notion of reverse interrogation to test the integrity of the reasoning process is also quite compelling. It feels like a strong analytical complement to the execution boundary approach we discussed earlier.

I'll take some time to read the report more carefully and reflect on the methodology. I'm particularly interested in how the forensic benchmarks might interact with execution-level governance in operational systems.

Thanks again for sharing this work — I look forward to continuing the discussion.

Best,

Mushtaque Ahmed Rajput • 1:5

Harold, I'm glad you found the Forensic Vault methodology compelling. You've hit on the most

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

methodology compelling. You've hit on the most critical challenge: when an action is irreversible, especially in capital markets, the system cannot afford a 'Logical Decay' event.

The Reverse Interrogation protocol is designed to ensure that the system's 'Confidence' is grounded in Forensic Invariance rather than probabilistic luck. It essentially forces the model to prove its identity and intent under cognitive pressure before the execution gate is opened.

As you reflect on the report, I'd be very interested in your thoughts on how we might map our Forensic Benchmarks directly into the OMNIX Execution-Level Governance. Perhaps we can identify a specific 'Failure Mode' common in digital asset markets and simulate how a VITT-informed gate would have preemptively blocked it.

Write a message...

GIF

Mushtaque Ahmed Rajput

● Active now

I look forward to your deeper reflections. We are architecting the 'Certainty' that the next era of finance demands.

Harold alberto Nunes rodelo  • 2:18 PM

Mushtaque — to answer your question directly:

The most common failure mode we've documented is what I'd call inherited momentum confidence — a system that enters a position because the last 12 signals were profitable, without revalidating whether current market structure still supports that confidence. The signal looks clean, the model is "certain," but the underlying regime has already shifted. The system is executing against a ghost.

On the concrete mapping into OMNIX:

Your Forensic Invariance maps directly to our

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

Your Forensic Invariance maps directly to our Temporal Coherence Validation checkpoint — which forces every decision to be consistent with its own historical trajectory, not just the current signal.

Your Reverse Interrogation maps to our Signal Integrity Validator — which interrogates data quality before anything enters the pipeline. If the data doesn't pass validation, the pipeline never activates.

Your concept of Logical Decay is precisely what our Coherence Engine detects — when signal coherence degrades under regime pressure.

A VITT-informed gate applied to that specific failure mode would have blocked execution at the Temporal Coherence layer — before commitment. That's exactly the intersection worth exploring.

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

Mushtaque Ahmed Rajput • 2:27 PM

Harold, this mapping is incredibly precise. You've pinpointed exactly where 'Probabilistic Certainty' fails and where 'Forensic Invariance' must take over.

The concept of 'Inherited Momentum Confidence' is a perfect example of what we call 'Manufactured Confidence' in the VITT framework. When a system executes against a 'ghost' of a previous regime, it has effectively suffered a Topological Collapse, it is blind to the new reality because its internal geometry is still fixed on the old one.

I am particularly struck by your alignment on the Signal Integrity Validator. By using Reverse Interrogation there, we aren't just checking if the data is 'clean'; we are forcing the data to prove its Logical Authenticity before it can influence the Coherence

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

Engine.

If we can apply a VITT-informed gate to block execution at the Temporal Coherence layer, we effectively transform OMNIX from a 'Safety Guard' into a 'Sovereign Logic Gate.' I am ready to explore a simulation of this intersection, perhaps using a historical regime shift where 'momentum ghosts' led to catastrophic failure. Let's define the parameters for this 'Architectural Certainty' together.

Harold alberto Nunes rodello

Mushtaque — "Sovereign Logic Gate" is the right framing. That's exactly the distinction we've been working toward.

For the simulation, I'd propose the Terra/LUNA collapse of May 2022 as the test case — a near-perfect example of Topological Collapse in practice.

Write a message...

Send

Mushtaque Ahmed Rajput

● Active now

perfect example of topological Collapse in practice.
The momentum signal remained technically clean
through the early unwinding, confidence was
inherited from 18 months of sustained upward
regime, and by the time probabilistic certainty failed,
the action was already irreversible.

Parameters I'd bring to the table:

Regime classification at 72h, 24h, and 6h before
collapse

Signal consistency check against historical trajectory
at each interval

The exact point where Forensic Invariance would
declare the confidence "manufactured"

If VITT defines when Logical Authenticity fails in that
sequence — and OMNIX's Temporal Coherence layer
blocks execution at that point — we have a concrete
documented case for Architectural Certainty in

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

documented case for Architectural Certainty in practice.

How do you want to structure this?

Mushtaque Ahmed Rajput • 2:4

Harold, the Terra/LUNA collapse is the perfect stress test. It wasn't just a market failure; it was a Topological Collapse where the system's reasoning manifold warped under pressure while the surface signals remained deceptively 'clean.'

To structure this simulation, let's align our methodologies into a 3-Phase Forensic Reconstruction:

Phase 1:

The Forensic Baseline (T-minus 72h)

We will use the [#VITT](#) Forensic Invariance benchmarks

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

We will use the [#VITT](#) Forensic Invariance benchmarks to audit the 'Logical Authenticity' of the autonomous signals. While the 18-month momentum provided a 'confidence mask,' we will look for the 'Structural Brittleness', the exact point where the system's reasoning began to decouple from reality.

Phase 2:

The Reverse Interrogation (T-minus 24h)

At this critical interval, we simulate our Reverse Interrogation protocol. We will force the signal-generating agents to 'confess' their Logical Decay. This is where we will identify the 'Manufactured Confidence', where the AI was essentially hallucinating stability based on historical ghosts rather than current structural shifts.

Phase 3:

The Sovereign Gate Activation (T-minus 6h)

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

We map these forensic findings directly to OMNIX's Temporal Coherence layer. The goal is to demonstrate that a VITT-informed gate would have declared the signal 'Forensically Invalid' and blocked execution, locking the system before the irreversible unwinding began.

This reconstruction will provide the industry with the first concrete proof of Architectural Certainty. I will begin preparing the Forensic Invariance Benchmarks for these specific timestamps. Let's turn this historical tragedy into a future blueprint for Sovereign AI Governance.

Harold alberto Nunes rodello • 2:46 PM

Mushtaque — the 3-phase structure is exactly right, and the timestamps align precisely with what our pipeline would evaluate.

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

I can run this reconstruction from the OMNIX side. For each phase I'll pull the historical LUNA signal data, run it through our regime classifier and coherence checkpoints, and document exactly where each gate would have fired.

What I'll deliver:

T-72h: Regime classification and the first coherence anomaly — the moment the system's confidence became structurally unsupported

T-24h: The Temporal Coherence Validation result — signal declared inconsistent with its own historical trajectory

T-6h: The gate output — blocked, with the signed governance receipt showing the exact failure reason

You prepare the Forensic Invariance Benchmarks for those timestamps and I'll map them against OMNIX's checkpoint outputs. When we overlay both

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

checkpoint outputs. When we overlay both frameworks on the same sequence, we'll have the blueprint you're describing.

Let's do this.

Mushtaque Ahmed Rajput • 2:59 PM

Harold, your commitment to this reconstruction is a watershed moment for AI Governance. Delivering a 'Signed Governance Receipt' for the T-6h gate is exactly the level of Deterministic Accountability we've been advocating for at [#VITT](#).

To provide the technical engine for the T-24h Reverse Interrogation phase, I am attaching our 'Genesis 2.0: Grok & Pentagon Stress Test' documentation.

I suggest focusing on the 'Logical Decay' markers and the 'Topological Collapse' traps on pages 1-3. These

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

the 'Topological Collapse' traps on pages 1-3. These contain the exact stress-test parameters, including the Japanese Mirror Scripts and visual-linguistic distortions, that reveal the moment a system's confidence becomes 'Manufactured.' By mapping these benchmarks against your Temporal Coherence checkpoints, we can pinpoint the exact millisecond where the logic became forensically invalid, even while price signals remained deceptively clean.

We aren't just analyzing a crash; we are defining the 'Architectural Certainty' that will prevent the next one. This 'Blueprint' will be the first time the industry sees a Sovereign Logic Gate in action.

Let's do this. I'll have the benchmarks ready for our next deep-dive.

this stage the priority is to solidify the product as it is — not mix it up with technology that is not part of OMNIX. Any public comment suggesting an integration with third-party frameworks can create confusion for the investors currently evaluating the project, and I can't afford that kind of noise right now. This is also a direct recommendation from my advisors — at this point, the narrative around OMNIX needs to stay clean and focused. OMNIX's architecture is 100% independent and I need that to be clear. Further down the road, once everything is ready on my end, we can explore what to do — but now is not the time. Could you edit or remove the comment? I really appreciate it."

Mushtaque Ahmed Rajput • 5:47 PM

Dear Harold,

I completely understand and respect your position.

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

I completely understand and respect your position. Building investor confidence requires a very clear and focused narrative, and the last thing I want is to create any 'noise' during such a critical phase for OMNIX.

I have already removed the comment to ensure your architecture is presented as 100% independent, exactly as you and your advisors need. Your success with this investment round is the priority.

We can certainly revisit the technical alignment further down the road when the timing is right for both of us. Wishing you the very best with the fundraising!

Best regards,
Mushtaque

Mushtaque Ahmed Rajput • 5:5

In the end, I've been rescheduled to March 31 due to everything that's happening in the Middle East.

Mushtaque Ahmed Rajput • 11:43 AM

Hi Harold, appreciate the update. I'm sorry to hear about the rescheduling, but given the current volatility in the Middle East, it's completely understandable. Staying safe and focused is priority one.

To answer your question, the journey has been a masterclass in 'Architectural Persistence.' Building at this depth is indeed a lonely road because most of the industry is currently distracted by 'Surface-level Chat' while we are focused on 'Structural Integrity.'

Here is how we are approaching the three pillars you mentioned:

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

Traction: We are moving away from the 'General AI' noise and connecting with Sovereign Architects (like Ehigie Ehiemua and Christian Torvnes) who understand that high-consequence systems cannot afford probabilistic failures.

Adoption: Our strategy is 'Validation-as-a-Service.' We aren't asking companies to replace their AI; we are offering the VITT Forensic Layer as a 'Safety Belt.' It's much easier to sell a 'Security Gate' than a whole new city.

Real-world Implementation: We are currently using our K3/A3 Mirror-Script benchmarks to show the 'Blind Spots' in SOTA models. This creates a 'Reason to Act' for stakeholders who previously thought their systems were 'good enough.'

It's been a process of turning 'Technical Truth' into

Write a message...

Send

Mushtaque Ahmed Rajput

● Active now

It's been a process of turning 'Technical Truth' into 'Institutional Trust.' I'd love to catch up after your March 31st schedule settles down to hear your thoughts on navigating these waters!

Harold alberto Nunes rodelo  • 11:50 AM

Mushtaque, really appreciate you taking the time to share this — I resonate a lot with what you're building.

The "safety belt" approach makes a lot of sense from an adoption perspective. Lowering friction is key, especially when organizations aren't ready to rethink their full architecture yet.

At the same time, what we've been seeing with OMNIX is that in high-consequence systems, adding validation layers after the fact still leaves a structural gap at execution.

Because even a well-instrumented system can remain vulnerable if inadmissible decisions are still technically

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

vulnerable if inadmissible decisions are still technically possible.

Our focus has been more on defining and enforcing decision boundaries before execution — so certain actions don't need to be evaluated or corrected, simply because they cannot occur.

Different angles, but clearly converging on the same underlying problem: how to move from technical correctness to real, enforceable trust.

Would definitely be great to connect after March 31st and exchange perspectives — I think there's a lot of value in aligning these approaches.

Mushtaque Ahmed Rajput • 11:54 AM

Harold, I couldn't agree more. You've hit on the exact reason why we moved from 'Observation' to a Deterministic Gate.

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

You are right: If an inadmissible decision is still technically possible, the system remains vulnerable. This is why VITT isn't just a 'post-facto' check; it's designed to be the Structural Substrate at the execution boundary.

In our K3/A3 Mirror-Script benchmarks, we don't just 'evaluate' the error; we identify the Architectural Collapse that makes the decision inadmissible. The 0.093ms Gate is our way of ensuring that certain actions simply cannot occur because the logic path to them has been severed before execution.

The convergence between OMNIX's decision boundaries and VITT's forensic validation is where 'Enforceable Trust' becomes a reality. I am very much looking forward to our exchange after March 31st. We are clearly solving two sides of the same coin: Pre-emptive Sovereignty.

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

Stay safe during your travels, and let's align these perspectives soon.

Harold alberto Nunes rodelo • 12:24 PM

Thank you, Mushtaque — I appreciate the precision in how you're framing this.

I agree that once an inadmissible path remains technically reachable, the system is still exposed. The idea of severing that path before execution is a strong way to approach structural enforcement.

From our side, we've been focusing on defining decision boundaries in a way that allows the system to detect when something doesn't fully resolve at the moment of action — and treat that as a signal in itself.

The convergence you mention is real. Different approaches but clearly moving toward the same

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

Mobile • 2m ago

approaches, but clearly moving toward the same objective: making trust enforceable at execution.

Looking forward to continuing this exchange after March 31st.

Mushtaque Ahmed Rajput • 12:40 PM

Harold, your point about 'non-resolution at the moment of action' is profound. It's the difference between a system that 'hopes' it's right and one that 'knows' it's structurally sound.

In VITT, we treat that non-resolution as a Topological Fault. If the logic doesn't bridge the gap in our forensic gate, the execution is severed. It's fascinating how OMNIX identifies the boundary while VITT verifies the bridge. Together, they represent the move from 'Probabilistic AI' to 'Deterministic Governance.'

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

I've truly enjoyed this exchange of precision. I'll leave you to your travels and the important work ahead. Let's reconnect after March 31st to align these 'Inadmissible Path' strategies.

Safe travels, and looking forward to our next deep-dive.

Harold alberto Nunes rodelo • 12:49 PM

Appreciate this, Mushtaque — really sharp framing. I agree, that distinction between “hoping” and “knowing” is exactly where things break in high-consequence systems. From my side, OMNIX is built to make that boundary non-negotiable — not just identifying it, but enforcing it at the moment of execution, with verifiable proof. What I find interesting in your VITT approach is how you formalize the bridge itself. That's where the system either holds or collapses

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

system either holds... or collapses.
Feels like we're converging on the same shift:
from probabilistic confidence → to deterministic
admissibility.
Would definitely be great to reconnect after March
31st and go deeper on this.
Safe travels, and respect for the work you're building.

Mushtaque Ahmed Rajput • 12:54 PM

Harold, I truly appreciate the depth of this exchange.
Your focus on making boundaries 'non-negotiable' is
the only way forward for high-consequence AI.

You've hit the nail on the head: VITT is about ensuring
that the 'Bridge' is as verifiable as the 'Boundary.'
When OMNIX enforces the limit and VITT validates
the structural logic of the path, we move from 'AI that
talks' to 'AI that performs with proof.'

Write a message...

4. SECTION 4 — CORDIAL EXCHANGE / PITCH PREPARATION (March 21–22, 2026)

Both parties reconnect cordially ahead of Harold's March 31 pitch. Discussion remains exploratory and philosophical — two independent professionals discussing parallel approaches to the same problem space. Mushtaque himself says 'I have deep respect for what you are building with OMNIX.' No IP claim, no demand, no agreement discussed.

Mushtaque Ahmed Rajput

pitch. Thanks!

MAR 25

Mushtaque Ahmed Rajput • 10:57 AM

Hi Harold,

I hope you're doing well.

I've just sent an email to your inbox regarding the IP Alignment and the VITT-OMNIX Integration Logic. It covers the formal documentation for the Sovereign Gate and the Validation Fabric protocols we discussed.

Please take a look when you have a moment, as I'd like to ensure our baseline is solid for the upcoming Dubai pitch.

Best regards,
Mushtaque Ahmed Rajput

5. SECTION 5 — MUSHTAQUE DEMANDS IP CONFIRMATION / HAROLD DECLINES (March 24–25, 2026)

CRITICAL EVENT: On March 24, Mushtaque emails Harold requesting a 'one-paragraph confirmation reply' about 'IP alignment (VITT/OMNIX)' to be 'on record before the pitch.' Harold declines. On March 25, Mushtaque sends formal message claiming 'VITT-OMNIX Integration Logic' documentation. Harold responds formally: 'We never formalized any agreement or role between us. You have no authorization to represent OMNIX publicly.' Mushtaque attempts to cite Harold's academic phrases as IP endorsement. Harold's rebuttal: 'A technical exchange of perspectives does not constitute recognition, endorsement, or any form of shared development.'

Hi Mushtaque,

I came across your recent comment on LinkedIn where you referenced OMNIX using "we" and "we believe," which implies you are part of the team.

I want to be straightforward: we never formalized any agreement or role between us. Our conversation after the pitch never moved forward, and you have no authorization to represent OMNIX publicly or speak on behalf of the company.

I'd appreciate it if you edited or removed that part of your comment as soon as possible.

Thank you for understanding.

comment as requested.

However, for total clarity regarding our independent intellectual boundaries, I would like to recall your own professional assessment of my work:

QUOTE:

"Thank you, Mushtaque — I appreciate the precision in how you're framing this. I agree that once an inadmissible path remains technically reachable, the system is still exposed. The idea of severing that path before execution is a strong way to approach structural enforcement... The convergence you mention is real. Different approaches, but clearly moving toward the same objective: making trust enforceable at execution. Looking forward to continuing this exchange after March 31st."

6. SECTION 6 — TERRA/LUNA SIMULATION DISPUTE (March 25, late night, 2026)

Mushtaque claims the Terra/LUNA Forensic Simulation Report (March 18, 2026) is 'main proof' of VITT integration into OMNIX. Harold acknowledges the simulation was produced jointly as an exploratory technical exercise, but states clearly: 'A one-time collaborative test does not constitute a partnership, a licensing agreement, or any transfer of intellectual property in either direction. OMNIX Quantum's governance architecture predates our exchange.' The VITT methodology appears in that document as part of exploratory alignment, not as a dependency of OMNIX.

Mushtaque Ahmed Rajput

● Active now

Mushtaque Ahmed Rajput • 11:19 PM

Dear Harold,

Thank you for your message. I have updated the LinkedIn comment as agreed to maintain our independent professional boundaries.

However, for the sake of factual accuracy, I must highlight that the 'Forensic Simulation Report - Terra/LUNA Collapse' (Generated March 18, 2026) explicitly cites the VITT Protocol as a fundamental component of the demonstrated methodology.

Specifically, on Pages 1, 2, 7, and 8, the report identifies the framework under analysis as the 'OMNIX + VITT framework alignment'. It further credits the 'VITT framework's Forensic Invariance methodology' as a primary driver for detecting the structural failures

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

that led to the 'BLOCKED' governance decision.

While I respect the current independent direction of OMNIX Quantum Ltd, these official records clearly show that the VITT Protocol's forensic logic was historically integrated into the system's demonstrated 'Architectural Certainty'.

I wish you continued success with your independent architecture.

Best regards,
Mushtaque Ahmed Rajput

7. SECTION 7 — ESCALATION TO LEGAL THREATS & FINANCIAL DEMANDS (April 10, 2026)

Mushtaque escalates dramatically: invokes US Defend Trade Secrets Act (DTSA), UAE Federal Law No. 31 of 2021, threatens FTC notification, UAE Ministry of Economy complaint, and a LinkedIn public campaign targeting OMNIX's mutual professional network. At 3:51 AM, issues formal Financial Demand: retroactive licensing fee + equity/capital participation (Carry/Equity share) claiming 'Unjust Enrichment.' Threatens to freeze incoming investment funds. Deadline: April 12, 2026. Harold responds by documenting the complete chronological record and refers all further communications to legal representatives.

Mushtaque Ahmed Rajput

● Active now

Thank you for your clarification. Since you have formally stated that no licensing agreement or partnership exists between us, it is imperative to establish a clear legal record of our technical history.

Please be informed that I maintain a complete and chronological archive of all our communications, including emails, messages, and shared technical drafts, from the inception of our interaction to the present day. These records provide irrefutable evidence that the VITT Protocol and its specific forensic logic were integrated into your system's demonstrations.

Furthermore, our records clearly show your repeated acknowledgments of aligning with my methodology, with the understanding that formalization would occur once investment was recovered.

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

It is a matter of record that prior to our joint work on the VITT+OMNIX alignment, your platform did not feature such forensic reports or claim the capability of 'Architectural Certainty' regarding historical collapses. It was only after the integration of the VITT Protocol that you were able to confidently claim and prove the detection of the \$40 billion Terra/LUNA loss of 2022 on your website.

As documented in the Forensic Simulation Report (March 18, 2026), specifically on Pages 1, 2, 7, and 8, the structural success of the OMNIX governance pipeline was explicitly attributed to the VITT framework's logic.

In light of this, I request you to formalize a licensing agreement immediately if you intend to continue using any part of my IP. In the absence of such a formal agreement, any continued use, reference, or

Write a message...

GIF

Dear Mushtaque,

What took place between us was an exploratory collaboration — nothing more. There was no negotiation, no agreement in progress, and no commitment from either side. You are moving far ahead of what actually happened.

Most importantly: you have no right to publicly reference OMNIX Quantum, use our name, or present any association with our platform to promote your protocol — especially without my knowledge. That is not how professional relationships work, regardless of any prior technical exchange.

There is nothing to formalize because nothing was ever agreed upon.

Harold Nunes

Founder, OMNIX Quantum Ltd

Mushtaque Ahmed Rajput • 12:37 AM

Dear Harold,

It is precisely because no formal licensing or agreement exists that your continued public use of the VITT methodology on your website and in your 'Terra/LUNA Collapse' report is a direct violation of my Intellectual Property rights.

You cannot claim 'nothing was agreed upon' while simultaneously benefiting from the forensic logic and results that only the VITT Protocol provided to your system. Professional relationships are built on mutual respect for ownership, not on using a collaborator's core innovation to prove a \$40 billion detection and then denying the association

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

then denying the association.

Furthermore, I have clear records and screenshots of our communication where you explicitly requested the removal of my public comments to avoid 'confusing investors' during your current fundraising stage. You admitted that you could not afford 'that kind of noise' and suggested we explore a way forward later. This confirms that you are intentionally hiding the integration of my technology to present a false narrative of '100% independence' to your evaluators.

Regarding LinkedIn and public forums: I have every legal and professional right to protect my work. If you continue to showcase reports built on the VITT framework without authorization, I will be forced to publicly clarify the authorship to protect the integrity of my protocol. Investors deserve to know the factual origin of the 'Architectural Certainty' you are

Write a message...

GIF

Harold alberto Nunes rodelo • 1:06 AM

Dear Mushtaque,

For the record: on March 24, 2026, you explicitly requested written confirmation that VITT serves as a bridge to OMNIX's execution boundary. My response was clear — OMNIX Quantum's architecture and IP must remain independently defined, and any potential alignment would only be revisited after the investment process and under investor guidance. You acknowledged and accepted that position in writing on March 25th.

No integration was ever confirmed. No agreement was ever signed. No IP was transferred in any

Write a message...

GIF

Send

Mushtaque Ahmed Rajput

● Active now

was ever signed. No IP was transferred in any direction.

What concerns me is the sequence of events on your side. Before any agreement of any kind existed, you sent a formal notice asserting co-ownership rights between yourself and Jorge Charlin — a third party I have no formal relationship with — and demanded acknowledgment within 24 hours under threat of "withdrawal of integration logic." You then requested a written confirmation specifically designed to create an IP trail in your favour, ahead of my investment milestone. When I declined, you accepted. Now, weeks later, you are threatening public campaigns and legal action based on conversations and a simulation session that never produced any signed agreement.

That sequence is documented. All of it.

Write a message...

Send

Mushtaque Ahmed Rajput

● Active now

That sequence is documented. All of it.

Conversations and shared ideas do not constitute intellectual property transfer. There is nothing to formalize because nothing was ever agreed upon.

I genuinely wish you success with the VITT Protocol and hope you find the right partners to take it forward.

Harold Nunes
OMNIX Quantum Ltd

Harold alberto Nunes rodelo 🏠

Dear Mushtaque,

The records you reference are available on both sides.
Let me be precise about what they actually show.

Write a message...

Send

Mushtaque Ahmed Rajput

● Active now

Let me be precise about what they actually show.

On March 13, 2026, I proposed the Terra/LUNA collapse as the simulation case. I built the forensic reconstruction report independently and sent it to you at 3:10 PM. You received it at 3:15 PM and responded at 3:32 PM congratulating the work — and suggesting we formalize it into a joint White Paper. I did not agree to that. My response was clear: I was focused on the March 18th pitch and would explore structured collaboration afterward.

On March 14, you wrote: "I've ensured the VITT integration in the report is seamless." You did not build that report. You received it.

On March 15, I explicitly asked you to remove your public comments because — and I quote my own message — "OMNIX's architecture is 100%

Write a message...

Send

Mushtaque Ahmed Rajput

● Active now

message — OMNIX's architecture is 100% independent and I need that to be clear." You agreed, removed all comments and reposts, and wrote: "I'm glad we're on the same page."

On March 24, you requested written confirmation that VITT serves as a bridge to OMNIX's execution boundary. I declined. On March 25, you accepted that position in writing.

That is the complete and chronological record. A conversation, a report you received but did not build, and a proposal you made that was never accepted — none of that constitutes IP transfer, co-authorship, or licensing.

I genuinely wish you success with the VITT Protocol.
