

OMNIX — Pitch Scripts

90-Second & 60-Second Versions | EN / ES | ADR-027 Compliant

PITCH SCRIPTS

Version: 1.0
Date: February 17, 2026
Author: Harold Nunes, Founder & Product Architect
Status: APPROVED
ADR Compliance: ADR-023, ADR-024, ADR-025, ADR-027
Target: Eureka Dubai Semifinal, Investor Meetings, Elevator Conversations

Compliance Brief

Mandatory Language (ADR-027)

Rule	Requirement
Category Name	"Decision Governance Infrastructure"
Canonical Definition	"governance control architecture for automated decision systems"
Category Framing	"building the category" — present tense, never past
Vertical Anchor	"first validated in digital asset trading" — EVERY version
Investor Reframe	"how much risk exists without governance?" not "how much alpha?"

Prohibited Language

Phrase	Why
"Global leader in Decision Governance"	Supremacy claims — use "building"
"We created a new category"	Past tense implies market recognition — use "building"
"AI-powered trading bot"	Wrong competitive set
"Guaranteed returns" / "beat the market"	Illegal / unproven
"Stripe of governance" / "Palantir of X"	Sounds pitchy — use structural analogy instead
"We are the first" (without qualifier)	Unverifiable — use "first validated vertical"

Metrics — Locked (Zero Tolerance for Deviation)

Metric	Value	Source
Evaluation Cycles	670,000+	Shadow Portfolio + decision logs
Capital Preserved	98.5%	Learning Baseline period
Raising	\$500,000 USD	Pre-Seed
Equity	16.7%	—
Pre-Money Valuation	\$2.5M–\$3M	—
Learning Baseline P&L;	-\$15,198.73	Nov 2025 – Jan 14, 2026 (119 trades)
System Uptime	24/7 for 3+ months	Railway production deployment

Institutional Governance Statement (Ready-to-Use)

"OMNIX operates under a structured human governance layer with defined executive authority, parameter control, and override mechanisms, designed to scale into multi-party oversight as the platform institutionalizes."

Use when investors ask about team structure, oversight, or who controls the system. Full governance framework: [INSTITUTIONALGOVERNANCESTRUCTURE.md](../business/investor/INSTITUTIONALGOVERNANCESTRUCTURE.md)

Anti-Abstraction Rule

Every statement about "infrastructure" or "category" MUST be followed within 2 sentences by:

- A concrete metric (670,000+, 98.5%, etc.)
- A validated vertical reference ("digital asset trading")
- An operational evidence point ("running 24/7 since November 2025")

Without this, "infrastructure" sounds theoretical. With it, it sounds proven.

VERSION A — 90 SECONDS (Competition / Eureka Dubai)

English

Automation is growing faster than governance.

>

Today, systems can execute decisions automatically — but almost none have a real mechanism to control those decisions before they execute. And when there's no control, risk becomes invisible.

>

OMNIX is building the category of Decision Governance Infrastructure — a governance control architecture for automated decision systems. First validated in digital asset trading: 670,000+ evaluation cycles, 98.5% of capital preserved, running 24/7 since November 2025.

>

We're not a trading bot. We're not a prediction system. We are the control layer that determines whether an automated action can or cannot execute.

>

Our architecture evaluates every decision through a sequential checkpoint system with veto authority and fail-closed behavior — if a decision cannot be properly evaluated, it is automatically blocked.

>

Trading is the first validated vertical. The architecture is domain-agnostic — designed to extend into credit, insurance, and supply chain. Any environment where automated decisions involve real capital at risk.

>

And the timing is urgent. Regulatory frameworks like MiCA in Europe and ADGM in the Middle East are now requiring governance of automated decision systems. Institutional adoption is accelerating — but the governance layer doesn't exist yet. We're building it.

>

We're raising \$500,000 pre-seed to file three patent families protecting our core IP, expand into enterprise verticals, and establish our regulatory structure in ADGM Dubai.

>

OMNIX — governing decisions under uncertainty.

Estimated time: ~85-90 seconds

Español

La automatización está creciendo más rápido que la gobernanza.

>

Hoy los sistemas pueden ejecutar decisiones automáticamente — pero casi ninguno tiene un mecanismo real que las controle antes de ejecutarlas. Y cuando no hay control, el riesgo se vuelve invisible.

>

OMNIX está construyendo la categoría de Infraestructura de Gobernanza de Decisiones — una arquitectura de control de gobernanza para sistemas de decisión automatizados. Primera validación en trading de activos digitales: más de 670,000 ciclos de evaluación, 98.5% del capital preservado, operando 24/7 desde noviembre 2025.

>

No somos un bot de trading. No somos un sistema de predicción. Somos la capa de control que decide si una acción automatizada puede o no ejecutarse.

>

Nuestra arquitectura evalúa cada decisión mediante un sistema secuencial de checkpoints con autoridad de veto y comportamiento fail-closed — si algo no se puede evaluar correctamente, la decisión se bloquea.

>

Trading es la primera vertical validada. La arquitectura es independiente del dominio y está diseñada para extenderse a crédito, seguros y supply chain — cualquier entorno donde decisiones automatizadas impliquen riesgo real.

>

Y el timing es urgente. Marcos regulatorios como MiCA en Europa y ADGM en Medio Oriente ya están exigiendo gobernanza de sistemas de decisión automatizados. La adopción institucional se está acelerando — pero la capa de gobernanza aún no existe. La estamos construyendo.

>

Estamos levantando \$500,000 dólares pre-seed para registrar tres familias de patentes que protegen nuestro IP central, expandir hacia verticales enterprise y establecer nuestra estructura regulatoria en ADGM Dubai.

>

OMNIX — gobernando decisiones bajo incertidumbre.

Tiempo estimado: ~85-90 segundos

VERSION B — 60 SECONDS (Elevator / Networking)

English

Automation is growing faster than governance. Systems execute decisions automatically, but almost none have a real control layer that evaluates those decisions before execution.

>

OMNIX is building the category of Decision Governance Infrastructure — a governance control architecture for automated decision systems.

>

Our architecture uses a sequential checkpoint system with veto authority: if a decision can't be properly validated, it's blocked. Fail-closed by design.

>

First validated in digital asset trading — 670,000+ evaluation cycles, 98.5% of capital preserved, running 24/7 since November 2025.

>

The architecture is domain-agnostic. Designed to extend into credit, insurance, and supply chain — anywhere automated decisions involve capital at risk.

>

We're raising \$500,000 pre-seed. The regulatory window is open — MiCA and ADGM are creating demand for exactly this governance layer.

>

OMNIX — governing decisions under uncertainty.

Estimated time: ~55-60 seconds

Español

La automatización crece más rápido que la gobernanza. Los sistemas ejecutan decisiones automáticamente, pero casi ninguno tiene una capa de control real que las evalúe antes de ejecutarlas.

>

OMNIX está construyendo la categoría de Infraestructura de Gobernanza de Decisiones — una arquitectura de control de gobernanza para sistemas de decisión automatizados.

>

Nuestra arquitectura usa un sistema secuencial de checkpoints con autoridad de veto: si una decisión no se puede validar correctamente, se bloquea. Fail-closed por diseño.

>

Primera validación en trading de activos digitales — más de 670,000 ciclos de evaluación, 98.5% del capital preservado, operando 24/7 desde noviembre 2025.

>

La arquitectura es independiente del dominio. Diseñada para extenderse a crédito, seguros y supply chain — cualquier entorno donde decisiones automatizadas impliquen capital en riesgo.

>

Estamos levantando \$500,000 dólares pre-seed. La ventana regulatoria está abierta — MiCA y ADGM están creando demanda exactamente para esta capa de gobernanza.

>

OMNIX — gobernando decisiones bajo incertidumbre.

Tiempo estimado: ~55-60 segundos

Delivery Notes

Timing Breakdown — 90-Second Version

Section	Time	Content	Emphasis
Hook	0-10s	"Automation is growing faster than governance..."	Slow, deliberate. Let the problem land.
Identity + Evidence	10-25s	"OMNIX is building the category... governance control architecture... 670,000+ decisions, 98.5% preserved..."	Firm category declaration → immediate proof. No gap between claim and evidence.
Negation	25-30s	"Not a trading bot. Not a prediction system."	Quick, sharp. Clear differentiation.
Architecture	30-40s	"Sequential checkpoints... veto authority... fail-closed..."	Technical confidence. Don't rush.
Expansion	40-55s	"First validated vertical... domain-agnostic... credit, insurance, supply chain..."	Vision, but grounded — "designed to extend"
Why Now	55-68s	"MiCA... ADGM... governance layer doesn't exist yet..."	Urgency. Lean forward.
Ask	68-80s	"\$500,000 pre-seed... patent families... ADGM..."	Direct, confident. Eye contact.
Close	80-90s	"OMNIX — governing decisions under uncertainty."	Final. No smile needed. Let it land.

Timing Breakdown — 60-Second Version

Section	Time	Content
Hook	0-8s	Problem statement
Identity	8-15s	Category declaration

Architecture	15-25s	How it works (checkpoints, fail-closed)
Evidence	25-35s	Numbers + validated vertical
Expansion	35-45s	Domain-agnostic, multi-vertical
Ask + Close	45-60s	\$500K, regulatory window, tagline

Key Emphasis Points

Moment	Technique
"670,000+"	Pause BEFORE the number. Say it slowly. Let it register.
"98.5% of capital preserved"	Slight emphasis on "preserved." This is the proof.
"Fail-closed"	Brief pause after. This is the architectural differentiator.
"The governance layer doesn't exist yet"	Lower voice slightly. This is the opportunity statement.
"We're building it"	Direct. Confident. No hedging.
"Governing decisions under uncertainty"	Final line. Slow. No trailing off.

Anti-Abstraction Checklist

Every pitch version MUST pass this test. Check each line:

Question	Pass Criteria
Does this line sound proven or theoretical?	Must sound proven
Is there a concrete metric within 2 sentences of any "infrastructure" claim?	Yes — 670,000+ or 98.5%
Is "first validated in digital asset trading" present?	Yes — in every version
Could a listener mistake OMNIX for a trading bot?	No — explicit negation included
Is "building" language used (not "leading" or "dominating")?	Yes — "building" throughout
Does the ask include why NOW, not just what?	Yes — regulatory window (MiCA/ADGM)
Are patent claims framed as "filing/protecting" not "granted"?	Yes — "file three patent families"

ADR-027 Compliance Verification

ADR-027 Rule	Status
Uses "Decision Governance Infrastructure"	Present in all 4 versions
Uses "building the category" language	Present: "building" / "construyendo"
Says "first validated in digital asset trading"	Present in all 4 versions

Investor reframe (risk without governance)	Embedded in hook: "when there's no control, risk becomes invisible"
No supremacy claims	Zero instances of "leader" / "global" / "first ever"
No "Stripe of governance"	Not present
Numbers unchanged	\$500K / 16.7% / \$2.5M-\$3M / 670,000+ / 98.5% — all correct

Version History

Date	Version	Changes
Feb 17, 2026	1.0	Initial creation. 90s and 60s versions (EN/ES). Based on Harold Nunes's draft with "why now" and strengthened ask. ADR-027 compliant.

OMNIX — *governing decisions under uncertainty.*
