

OMNIX -- Executive Fact Sheet

OMNIX Decision Governance Infrastructure | March 2026 | Confidential

OMNIX - EXECUTIVE FACT SHEET

Phase 1 -- Institutional Validation

Version: 1.2

Issue Date: 6 March 2026

Platform Identity: Decision Governance Infrastructure for Automated Systems

ADR Count: 36 ADRs

Verification Status: 171 New Tests Passing (March 2026 Gap Closure)

1. SYSTEM STATUS -- MARCH 2026 UPDATE

As of March 6, 2026, OMNIX has completed its structural roadmap by closing the 4 primary architectural gaps:

- * Signal Integrity Validator (CP-0): Ensuring data quality before evaluation.
- * Forward Trajectory Implicator (CP-7b): Predicting multi-step implications of decisions.
- * Regime-Conditioned Kelly (RCK): Dynamic position sizing based on market regime.
- * Exit Governance Layer (EGL): A 3-gate pipeline for controlled trade liquidation.

The system now operates with 8 sequential entry checkpoints and a 3-gate exit pipeline.

2. STRATEGIC TIMELINE

CALIBRATION (COMPLETED)	OFFICIAL DAY 1	MARCH 2026 GAP CLOSURE
Nov 2025 - Jan 14, 2026 →	Jan 15, 2026 →	March 6, 2026
-----	-----	-----
119 test trades	Track record begins	8 Checkpoints + EGL
Veto system calibrated	Starting capital	36 ADRs Documented
Risk engine tuned	\$984,801.27	171 New Tests Passing

This structure ensures that learning noise is separated from operational performance, while architectural maturity is reached through documented gap closure.

3. FROZEN BASELINE -- SURVIVABILITY AUDIT

Before activating the official record, OMNIX was stress-tested under real market conditions.

Results from Calibration Period

Metric

Result

Capital Preservation

98.5%

Market Environment

BTC -7.37% drawdown

Max Drawdown (OMNIX)

1.5%

Entry Pipeline

8-tier (updated March 2026)

Exit Pipeline

3-gate EGL (updated March 2026)

Risk Volume Blocked

>\$43M notional (Learning Phase)

Evaluation Cycles

670,000+ (through Feb 2026)

Production Version

This phase proved survival first, before profit seeking.

4. OFFICIAL TRACK RECORD METRICS (AS OF MARCH 2026)

Metric	Current Status	Target
Official Trades	0 (Strict Governance)	100+
Real Win Rate	0.0%	>45%
Data Quality	100% (SIV CP-0)	100% (audit-ready)
Starting Balance	\$984,801.27	Growth with risk limits
Architecture Docs	36 ADRs	Immutable Record
Test Coverage	171 New Tests	Continuous Verification

No legacy or estimated data is allowed inside this window.

5. GOVERNANCE STATEMENT

"OMNIX has already learned.
Today it begins to be measured under full 8+3 governance."

The system has been surgically separated into:

- * Calibration history (engineering & learning)
- * Official performance (investable, auditable, comparable)

What appears on the terminal is not laboratory output -- it is controlled, governed execution through 8 entry checkpoints and 3 exit gates.

6. WHY THIS FRAMEWORK IS INVESTOR-GRADE

This structure eliminates three common red flags:

1) Legacy losses

The -\$15K during calibration is explicitly classified as R&D, not operations.

2) Cherry-picked performance

Investors can toggle:

[Official Track Record] | [Full History (incl. calibration)]

No data is hidden -- but it is properly labeled.

3) Moving goalposts

The architectural roadmap is now complete (March 2026 Gap Closure).

OMNIX is now a finished governance architecture ready for multi-vertical expansion.

Final Position

OMNIX is now operating as a governed, time-boxed, auditable trading system.

- * Not a demo.
- * Not a simulation.
- * Not a marketing dashboard.

A measurable machine.

This is what institutional readiness looks like.

Day 1-4 Update (Jan 19, 2026)

During the first 4 days of the official track record:

Metric	Value	Type
Signals Analyzed	47,507	Real (PostgreSQL)
Notional Blocked	\$950.14M	Real (PostgreSQL)
Est. Loss Avoided*	\$5.70M	Calculated estimate
Trades Executed	0	Real (100% preservation)
Capital Status	\$984,801.27	Real (unchanged)

*Est. Loss Avoided = Notional Blocked × 0.6% (per ADR-010 methodology). This is a calculated estimate, not realized loss.

Market Conditions: BLACK_SWAN detector identified 50%+ crash probability across all assets, triggering fail-closed protection.

Clarification: The "no estimated data" policy applies to trade execution data (win rate, P&L). Risk mitigation metrics use the documented ADR-010 methodology and are clearly labeled as estimates.
