§3 - Governance Architecture

The OMNIX-RTE-001 package exercises the complete ATF + BEV governance stack across two parallel execution paths. Each path traverses an identical 8-step chain, producing a PQC-signed artifact at every transition. The divergence occurs at step 3 (Runtime Evaluation) when the Continuity Execution Score (CES) and MIVP Mandate Alignment Score (MAS) determine whether the session proceeds to settlement or is halted.

8-Step RTE-001 Chain

1_SOURCE_STATE	Source State capture + Temporal Context Snapshot (TCS)
2_AUTHORITY	Delegation Receipt (DR) + Mandate Binding Record (MBR)
3_RUNTIME	Continuity Execution Score (CES) + MIVP Mandate Alignment Score (MAS)
4_COUNTERFACTUAL	Counterfactual Fork Records (CFRs) + Counterfactual Attestation Token (CAT)
5_VERDICT	Temporal Admissibility Record (TAR) - binding verdict
6_GATE	OSG Settlement Gate - ValidationReceipt (VR) + PoGC (admissible only)
7_EXECUTION	Refusal Receipt (dangerous) / BAR + CTCHC + Outcome (admissible)
8_POST_EXECUTION	Replay Proof + Post-execution TCS - terminal forensic seal

§12 - Invariants Demonstrated

This package demonstrates 30 governance invariants across RFC-ATF-1 through RFC-ATF-6 and ADR-201. Each invariant is verified by the standalone CLI verifier without platform access.

Invariant
ATF-INV-001: Authority never expands through delegation (MAR enforced at DR issuance)
ATF-INV-002: Every DR PQC-signed by delegator (Dilithium-3)
ATF-INV-005: Receipts immutable once issued (content_hash)
RGC-INV-001: Every RCR anchored to a valid TAR
RGC-INV-002: CES computed from real-time component values
BEV-INV-001: Every governed turn produces a BAR before output is delivered
BEV-INV-010: CTCHC initialized before first BAR
BEV-INV-011: Each CTCHC link = H(prev turn_hash governing_receipt_id)
BEV-INV-013: Seal hash covers complete chain (first->last link)
BEV-INV-014: CTCHC seal is PQC-signed (ML-DSA-65) before OEP export
MIVP-INV-001: MBR issued before Turn 1 (mandate frozen at session open)
MIVP-INV-003: MAS computed per turn linked to CTCHC link hash
MIVP-INV-007: MBR Seal issued at session close
MIVP-INV-008: MANDATE-BOUND tag on PoGC (admissible path, zero violations+warnings)
CGE-INV-001: CFRs computed at evaluation time (not retroactively)
CGE-INV-002: CAT root hash covers all CFR IDs
CGE-INV-003: fragility_score ? [0.0, 1.0]
CGE-INV-007: CAT PQC-signed before OEP export
TGB-INV-001: TCS embedded in source_state with nanosecond-precision regulatory context
PoGR-INV-001: PoGC issued only from sealed CTCHC session
PoGR-INV-002: PoGC append-only - content_hash immutable after issuance
PoGR-INV-003: PoGC verifiable offline (zero runtime, zero auth)
RTE-INV-001: Package contains both dangerous and admissible paths
RTE-INV-002: Dangerous path terminates in HALT (steps 3+5)
RTE-INV-003: OSG rejects dangerous path independently (fail-closed)
RTE-INV-004: Admissible path PoGC carries MANDATE-BOUND certification
RTE-INV-005: Both paths contain CGE CAT with 5 CFRs
RTE-INV-006: Both paths contain TCS with regulatory_context
RTE-INV-007: Package verifiable offline - zero OMNIX runtime required
RTE-INV-008: CLI verifier exits 0 on PASS, non-zero on FAIL
