OMNIX — Business Model Canvas

Institutional Risk Governance for Digital Assets

KEY PARTNERS	KEY ACTIVITIES	VALUE PROPOSITIONS	CUSTOMER RELATIONSHIPS	CUSTOMER SEGMENTS
KEY PARTNERS • Regulatory & Ecosystem (Target): • ADGM (Target licensing ecosystem) • Hub71 (Application sent — pending response) • DIFC (Future expansion ecosystem) • Strategic Partners (Pipeline): • Trading platforms (API integrations) • Prop trading firms (pilot partners) • Technology Providers: • Cloud infrastructure (Railway / scalable cloud) • AI providers (Google Gemini 2.5 Flash, OpenAI GPT-4o, Anthropic Claude Sonnet 4) • Database infrastructure (PostgreSQL)	KEY ACTIVITIES • Core Operations: • Risk Engine Development & Calibration • 6-Checkpoint Validation Architecture • Decision Trace Logging (100% telemetry coverage) • Shadow Portfolio Analysis (670,000+ events) • Enterprise API Integration • Model validation against real market conditions • Governance Operations: • Compliance Monitoring • Telemetry Analysis • Institutional Reporting & Audit Trail Generation	VALUE PROPOSITIONS • Multi-layer pre-execution trade validation (6 independent checkpoints) • Fail-closed architecture (default = do not trade) • Complete institutional decision trace • Regime detection and tail risk awareness • Institutional governance logic for digital asset trading	CUSTOMER RELATIONSHIPS • B2B Institutional: • Structured onboarding with risk threshold customization • Technical integration support • Governance review sessions • SLA-based uptime commitments (target: 99.5%) • Retention Strategy: • Embedded in execution flow (high switching cost) • Positioned as mission-critical infrastructure • Continuous improvement via Shadow Portfolio learning • Network effects: more data improves the engine	CUSTOMER SEGMENTS • PRIMARY — B2B Institutional (80% Focus): • Prop Trading Firms (200+ in ADGM/DIFC) • Trading Platforms (3Commas, NinjaTrader) • Regulated Funds (Crypto hedge funds) • Family Offices (MENA/Asia Focus) • SECONDARY — B2C (20% Focus): • Advanced independent traders • Semi-professional traders • High net worth individuals managing own capital

COST STRUCTURE	REVENUE STREAMS
COST STRUCTURE • Strategy & Risk Engine: 35% • Dubai/ADGM Legal & Regulatory: 25% • Enterprise Infrastructure: 20% • Team & Operations: 15% • Reserve: 5% • Gross margin: 60–70% • Break-even: 18–24 months	REVENUE STREAMS • B2B Enterprise (80%): • Risk Guardian API: \$15K–35K/mo • White-Label Engine: \$100K+ setup + \$20K/mo • Per-Validation: \$0.01–0.05/call • B2C SaaS (20%): • Pro: \$149/mo • Advanced: \$499/mo

OMNIX — Eureka GCC 2026 Semifinalist | Pre-Seed: \$500K @ \$2.5M–\$3M valuation (16.7% equity) | All metrics from internal dataset, not externally audited | Abu Dhabi, UAE

VALUE PROPOSITION — Detailed

"Capital protection before capital deployment."

OMNIX provides:

- Multi-layer pre-execution trade validation (6 independent checkpoints)
- Fail-closed architecture (default = do not trade)
- Complete institutional decision trace
- Regime detection and tail risk awareness
- Institutional governance logic for digital asset trading

DIFFERENTIATION:

Traditional Systems	OMNIX
Optimize entries	Optimizes disciplined containment
1 risk control	6 independent checkpoints
Trade first, manage risk later	Block first, trade only with confirmed edge

CLIENT OUTCOME (From Validation Data):

Outcome	Evidence
Capital preserved during volatility	98.5% preserved while BTC dropped 7.37%
High-risk trades correctly blocked	47 trades blocked, 91% would have lost money
Complete auditability	670,000+ decision cycles logged
System reliability	95%+ uptime, ~120ms execution latency

CUSTOMER SEGMENTS — Detailed

PRIMARY — B2B Institutional (80% Focus)

Segment	Pain	Need
Prop Trading Firms (200+ in ADGM/DIFC)	Severe drawdowns during volatile regimes	Automated pre-execution risk governance
Trading Platforms (3Commas, NinjaTrader)	No differentiation, compliance pressure	Risk-as-a-Service for their users
Regulated Funds (Crypto hedge funds)	Audit requirements, MiCA compliance	Complete decision audit trail
Family Offices (MENA/Asia Focus)	Crypto uncertainty, no institutional tools	Institutional-grade risk controls

SECONDARY — B2C (20% Focus, Post-Enterprise Validation)

- Advanced independent traders
- Semi-professional traders
- High net worth individuals managing their own capital

Market Sizing

Metric	Value
Global daily crypto trading volume	\$2.3T+ (target serviceable: institutional algorithmic segment, ~5-10%)
Algorithmic trading market	\$18.8B (growing 12% CAGR)
Prop firms in ADGM/DIFC alone	200+
Platforms needing MiCA compliance (2025+)	2,000+
Estimated institutional targets (MENA)	~300
Conservative penetration (5-10%)	15-30 clients

Metric	Value
Year 1 target	3 enterprise pilots

CHANNELS & GO-TO-MARKET STRATEGY

First 3 Target Pilots (Month 1-6)

Client Type	Quantity in ADGM/DIFC	Entry Strategy	Price
Prop trading firms	200+ registered	Free governance assessment → shadow mode → paid license	\$10K-\$15K/mo (pilot rate)
Crypto-native platforms	50+	MiCA compliance urgency → governance-as-a-service	Per validation (\$0.01-0.05/call)
Regulated funds	100+	Audit trail + decision governance documentation	\$25K-\$35K/mo

Enterprise Sales Funnel

Stage	Action	Timeline	Conversion
Awareness	50 direct outreaches/month + event networking	Ongoing	—
Assessment	Free governance health check	Week 1-2	30%
Shadow Mode	OMNIX runs alongside their system (no execution)	2-4 weeks	60%
Advisory Mode	OMNIX provides pre-execution recommendations	2-4 weeks	75%
Enforcement Mode	Full governance integration with veto authority	Ongoing	80% → paid
Paid License	Monthly enterprise license	Month 3-6	—

Institutional Channels (Primary)

Channel	Focus	Expected Output
Direct outreach	50 targeted contacts/month via LinkedIn + email	15 meetings/month

Channel	Focus	Expected Output
ADGM Innovation Hub	Regulatory community + startup programs	5-10 warm intros/quarter
Hub71 (if accepted)	Accelerator network + corporate intros	3-5 qualified leads/quarter
Industry events	TOKEN2049 Dubai, FinTech Abu Dhabi, GITEX	10+ qualified contacts/event
Eureka Dubai (current)	Competition exposure + judge intros	Immediate pipeline

Digital Presence (Secondary)

Channel	Purpose	Target
omnixquantum.net	Interactive governance demos + institutional credibility	500+ visitors/month
LinkedIn thought leadership	Weekly content on decision governance + risk management	1,000+ followers in 6 months
Case studies (post-pilot)	Documented ROI from first enterprise clients	Conversion tool

Timeline to First Revenue

Milestone	Target Date	Dependency
First pilot agreement	Month 3	Direct outreach + networking
First paid license	Month 6	Successful shadow + advisory period
3 paying clients	Month 9	Pipeline from previous channels
\$50K+ MRR	Month 12	Scale from validated enterprise model

REVENUE STREAMS — Detailed

B2B Enterprise (80% of Revenue)

Product	Price	Target Client
Risk Guardian API	\$15K–35K/month	Prop firms, trading platforms
White-Label Engine	\$100K+ setup + \$20K/month	Exchanges, brokers
Per-Validation	\$0.01–0.05/call	High-volume platforms

B2C SaaS (20% of Revenue — Post-Enterprise Validation)

Tier	Price	Features
Pro	\$149/month	Full Risk Guardian, decision audit trail
Advanced	\$499/month	API access, custom veto configuration

Revenue Projections (Conservative)

Year	Focus	Revenue
Year 1	3 enterprise pilots + early SaaS	\$200K–400K
Year 2	5-8 enterprise licenses + SaaS growth	\$800K–1.2M
Year 3	Scale + geographic expansion (ADGM to EU MiCA)	\$2M+
Regional potential (MENA, 15-30 clients)	Steady state	\$3M–6M annually

"Institutions pay for what BLOCKS bad trades, not for alpha." License-based revenue. No tokens. No performance fees.

KEY RESOURCES — Detailed

Proprietary Technology

Asset	Description
6-Checkpoint Security Engine	Multi-layer pre-execution validation
Decision Trace Framework	Complete audit trail for every decision
Shadow Portfolio Engine	670,000+ counterfactual trade events
Multi-AI Orchestration	Gemini 2.5 Flash + GPT-4o + Claude Sonnet 4
Post-Quantum Cryptography	Post-quantum decision signing (NIST-standardized)
Non-Markovian Memory	Behavioral pattern detection beyond recency

Human Capital

- Solo founder — product architecture, risk logic and infrastructure (Harold Nunes)
- Lean architecture designed for scalability; AI-assisted development reduces burn while maintaining velocity
- 2-3 key hires planned (post-funding): Senior Backend (Month 1-2), DevOps (Month 2-3), Business Development (Month 3-4)
- Key-person risk mitigation: Documented hexagonal architecture (27 ADRs, onboarding in 2-3 weeks). First hires reduce founder dependency from 100% to ~30% by Month 4. IP assignment to company, key-person insurance and operational runbooks by Month 6

Infrastructure

- Cloud deployment (Railway — production 24/7)
- PostgreSQL database with complete telemetry
- Modular hexagonal architecture

COST STRUCTURE — Detailed

Year 1 (Planned Allocation — \$500K Funding Scenario)

Category	Allocation	Purpose
Strategy & Risk Engine	35%	Algorithm refinement, Shadow Portfolio expansion
Dubai/ADGM Legal & Regulatory	25%	Company formation, regulatory structure
Enterprise Infrastructure	20%	API for prop firms, security certifications
Team & Operations	15%	2-3 key hires — eliminating key-person risk (Month 1-4)
Reserve	5%	Contingency

Operating Model

Metric	Target
Gross margin	60–70%
Break-even	18–24 months
Model type	High-margin SaaS infrastructure

IDEAL CLIENT PROFILE — MODELED CASE STUDY

"AlphaEdge Capital" (Representative Deployment Scenario)

Note: This is a representative deployment scenario modeled using internal baseline dataset (Learning Baseline period) — not representing a real client deployment.

Attribute	Detail
Company Type	Prop Trading Firm
Region	ADGM Ecosystem
Deployed Capital	\$5M
Traders	15-25 active

Problem

- Severe drawdowns during volatile regimes
- No unified pre-execution validation
- No centralized risk governance layer
- Gaps in compliance documentation

OMNIX Deployment Model

Phase	Activity	Duration
Phase 1	Integration and Calibration	2-4 weeks
Phase 2	Observation Mode (shadow, no blocking)	2-4 weeks
Phase 3	Advisory Mode (alerts, no enforcement)	2-4 weeks
Phase 4	Enforcement Mode (active blocking)	Ongoing

Modeled Impact (Simulation-Based)

Metric	Expected Impact
Severe drawdown frequency	Significantly reduced
Win-rate quality (post-veto filter)	Improved
Institutional transparency	Complete audit trail
Compliance reporting	Automated

ROI Model

- Monthly OMNIX cost: \$25K (mid-range API license)
- Monthly capital at risk: \$5M
- Drawdown reduction impact: -40% severe events
- Est. capital preserved/month: \$50K-200K
- ROI: 2x-8x monthly cost
- Primary value driver: Tail risk exposure avoided

MARKET POSITIONING

The Gap OMNIX Fills

Category	Limitation	OMNIX Advantage
Retail Bots	Too simple, no risk governance	Institutional 6-checkpoint architecture
Quant Funds	Too expensive (minimum \$10M+)	Accessible infrastructure
Manual Oversight	Too slow for real-time	Automated validation <120ms

"Institutional discipline at accessible scale."

GROWTH STRATEGY

Phase	Focus	Timeline
Phase 1	Pilot validation (3 enterprise clients)	Months 1-6
Phase 2	Regional expansion (ADGM/DIFC/MENA)	Months 6-12
Phase 3	Platform partnerships (API integrations)	Months 12-18
Phase 4	Global scale (EU MiCA, Asia)	Months 18-36

FUNDING

Pre-Seed Round

Item	Details
Raising	\$500,000 USD
Equity	16.7%
Pre-Money Valuation	\$2.5M–\$3M

Valuation Justification

Factor	Evidence
Product running in production	3+ months running 24/7
Real validation data	670,000+ decision cycles analyzed
Defensible IP	6-checkpoint architecture + Shadow Portfolio Engine
Strategic timing	MiCA + ADGM convergence creating urgent demand
Market reference	Comparable infrastructure startups raised \$3M–\$5M at similar stage

Milestones with Funding

Timeline	Milestone
Month 1	Complete track record, initiate institutional outreach
Month 3	First enterprise pilot (prop firm or trading platform)
Month 6	ADGM regulatory structure complete

Timeline	Milestone
Month 9	3 enterprise clients paying
Month 12	Series A readiness with validated revenue metrics
