

What Happens When an Automated System Makes the Wrong Decision — And There Is No Record?

OMNIX is the governance infrastructure that ensures every automated decision is evaluated, authorized, and cryptographically sealed — before it executes.

The Real Cost of One Unaudited Decision

Every day, automated systems execute thousands of decisions that carry direct financial, legal, and reputational exposure. The question is not whether something will go wrong — it is whether you will be able to prove what happened when it does.

€35M

Maximum fine under EU AI Act per incident

\$50M+

Average regulatory fine for AML violations

78%

Of AI incidents result in no recoverable audit trail

"When regulators ask what the system decided, why it decided it, and who authorized it — most organizations cannot answer any of the three."

Scenario	Without OMNIX	With OMNIX
Automated trade executes incorrectly	No signed record. Dispute resolution takes months. Potential liability.	Signed receipt proves what was evaluated and authorized. Dispute resolved in hours.
Regulator requests AI decision audit	Logs may be incomplete or missing. No cryptographic proof. Non-compliance risk.	Every decision carries a tamper-evident receipt. Full audit trail delivered instantly.
Insurance claim denied by automated system	Client disputes denial. No verifiable record of evaluation criteria applied.	Receipt shows all 11 checkpoints passed or which one blocked the decision.
Autonomous system takes unauthorized action	No pre-execution gate. System acted without independent governance approval.	Fail-closed pipeline blocked execution. Receipt proves governance was applied.

What OMNIX Does

OMNIX sits between your automated system and the moment a decision executes. It evaluates every proposed decision through 11 independent governance checkpoints and issues a cryptographically-sealed receipt. No receipt — no execution.

If any checkpoint fails → pipeline halts → decision is BLOCKED → signed receipt issued.

Decision Result	What It Means	Receipt Issued?
APPROVED	All 11 checkpoints authorized the decision. Execution proceeds.	Yes — signed proof of authorization
BLOCKED	One or more checkpoints identified a governance violation. Execution halted.	Yes — signed proof of rejection and reason
HOLD	Internal signal contradiction detected. Human review required before proceeding.	Yes — signed escalation record

The Business Case: ROI & Value Delivered

OMNIX is not a cost center — it is a risk-reduction investment with a quantifiable return. The value delivered falls into three categories: regulatory protection, operational efficiency, and reputational capital.

\$500K+

Minimum regulatory fine avoided per incident

100%

Audit trail coverage for every decision

<1ms

Governance evaluation time per decision

Value Category	Without OMNIX	With OMNIX	Estimated Impact
Regulatory Fines	No audit trail. Full exposure.	Signed receipt per decision.	€35M EU AI Act exposure eliminated
Incident Response	Weeks of log reconstruction.	Instant receipt retrieval.	80% reduction in response time
Legal Disputes	He said / she said. No proof.	Cryptographic proof of what was decided.	Disputes resolved in hours, not months
Compliance Reporting	Manual, error-prone, expensive to produce.	Automated, signed, instantly accessible.	60–80% reduction in compliance cost
Client Trust	Black box — cannot explain decisions.	Public verification URL per decision.	Measurable increase in client retention

Simple ROI Calculation

OMNIX Enterprise cost: \$20,000 – \$35,000 / month
One avoided EU AI Act fine: €35,000,000
Break-even point: 1 avoided incident = 145 years of OMNIX cost

The question is not whether OMNIX is expensive.
The question is whether you can afford to operate without it.

Four Active Governance Domains

The same governance pipeline operates across four distinct industries simultaneously. OMNIX does not need to be rebuilt for each domain — it is configured. This is what makes it infrastructure, not software.

Domain	What OMNIX Governs	Key Risk Eliminated	Status
Digital Asset Trading	Every trade entry and exit decision. Real capital on Kraken exchange.	Unauthorized execution under adverse conditions	LIVE 24/7
Islamic Credit GCC / MENA	Murabaha financing decisions. Sharia compliance enforced at CP-6.	Riba violation and non-compliant structuring	OPERATIONAL
Insurance Claims	Automated claim assessment and fraud screening decisions.	Fraudulent approval and unaudited denial	OPERATIONAL
Robotics Pre-Execution	Autonomous action authorization before any physical command executes.	Unauthorized physical action — safety breach	OPERATIONAL

"The same 11-checkpoint pipeline that governs a crypto trade also governs a Murabaha credit decision. Domain changes. Governance does not."

The Governance Receipt: Your Proof of Accountability

Every decision processed by OMNIX generates a receipt. This receipt is the evidence that governance was applied. It is cryptographically signed, tamper-evident, and independently verifiable by anyone — regulators, auditors, counterparties, or clients.

```
{
  "receipt_id": "omnix-gov-20260401-a7f3c9",
  "timestamp": "2026-04-01T14:32:17.841Z",
  "decision": "APPROVED",
  "checkpoints_passed": 11,
  "checkpoints_total": 11,
  "veto_count": 0,
  "governance_summary": "All checkpoints passed",
  "cryptographic_seal": {
    "algorithm": "PQC signature (OMNIX implementation)",
    "merkle_root": "a3f7c2d8e1b490fa231c...",
    "verification_url": "https://omnixquantum.net/verify/..."
  }
}
```

Field	What It Proves
receipt_id	Unique link to the complete decision audit record
decision	The governance determination: APPROVED, BLOCKED, or HOLD
checkpoints_passed	How many of the 11 checkpoints independently authorized the decision
cryptographic_seal	Post-quantum signature — mathematically impossible to forge or alter after issuance
verification_url	Public link — any third party can independently confirm this receipt at any time

Regulatory Protection Built In

Governance receipts are the evidence layer that regulators are beginning to require. OMNIX was designed with these frameworks as first-class requirements — not added as an afterthought.

Framework	Requirement	OMNIX Coverage
EU AI Act	High-risk AI systems must maintain decision logs and enable human oversight.	Every decision: immutable signed receipt + HOLD escalation for human review
NIST AI RMF	AI systems must be measurable, explainable, and subject to governance controls.	11 checkpoints provide structured, measurable evaluation. Receipts enable explainability.
ISO/IEC 42001	AI management systems require documented risk controls and incident traceability.	Fail-closed pipeline + public verification URL = full incident traceability
AAOIFI (Islamic)	Sharia-compliant products must adhere to riba and gharar prohibitions.	CP-6 enforces Sharia principles as a pre-execution governance gate

How to Start

OMNIX is designed to integrate without disrupting your existing systems. The Shadow Mode tier allows full governance evaluation in parallel with your current operations — zero risk, immediate visibility.

Tier	How It Works	Best For	Investment
Shadow Mode	OMNIX runs in parallel. Evaluates every decision. No intervention. Full receipt generation.	Organizations that want visibility before committing to full governance.	Complimentary
Advisory	OMNIX results delivered as recommendations. Your team retains final decision authority.	Regulated environments where human oversight is currently mandatory.	\$8,000 / month
Enterprise	Full integration. OMNIX receipt required before any automated decision executes. Fail-closed.	Organizations with significant regulatory exposure or high-stakes automated operations.	\$20,000 – \$35,000 / month
Custom	Multi-domain deployment, private infrastructure, custom governance parameters, SLA guarantees.	Financial institutions, government, and infrastructure operators at scale.	Contact us

Operational Track Record

OMNIX has been in continuous production operation since July 2025, with the governance pipeline actively evaluating decisions across all four domains. The system has maintained 24/7 uptime with zero infrastructure failures.

Note: Digital asset trading operates with real capital on Kraken exchange. Islamic credit, insurance, and robotics domains operate in a controlled validation environment — governance logic is identical; domain-specific parameters are under calibration for production deployment.

Milestone	Date	Significance
Production deployment	July 2025	Live operation with real capital on Kraken exchange. Governance pipeline validated under live market conditions.
PQC implementation	November 2025	Post-quantum cryptographic signature deployed. All receipts carry NIST-standardized PQC signatures.
Multi-domain expansion	March 2026	Islamic credit, insurance, and robotics domains activated in validation environment. Same pipeline across all four sectors.
Track Record phase	January 2026	Recalibrated pipeline activated. Official governance performance measurement period begins.
Academic publication	March 2026	Architecture published on SSRN (abstract_id=6321298) and Zenodo (DOI 10.5281/zenodo.19056919).
Eureka GCC Semifinalist	2026	Selected as Semifinalist for Eureka GCC Dubai 2026 — competitive pan-GCC innovation program.

Three ways to move forward:

1. **Start with Shadow Mode** — free, no disruption, immediate governance visibility.
2. **Schedule a technical demo** — see the pipeline evaluate a real decision live.
3. **Request the full technical specification** — available under NDA for institutional due diligence.

OMNIX is raising \$500,000 USD pre-seed at a \$3,000,000 pre-money valuation. For investor inquiries contact Harold Nunes directly.
