

OMNIX

Decision Governance Infrastructure
for Automated Systems

"Preventing costly mistakes before they happen"

Prepared for: Darpan Salunkhe

Founder & CEO: Harold Nunes

Eureka! GCC 2026 — Semifinalist

Pre-Seed Round: \$500,000 USD

Valuation: \$2.5M–\$3M | Equity: 16.7%

Classification: Confidential — Mentor Review

1. The Problem

High-stakes automated decision systems — from trading to supply chain to lending — lack institutional-grade governance infrastructure, leading to billions in preventable losses annually.

- **Billions in preventable losses** annually due to poor automated risk governance
- **95% of algorithmic systems** ask 'When should I act?' instead of 'When should I NOT act?'
- **Single-layer risk checks** fail during tail events (flash crashes, liquidity cascades)
- **No audit trail** for automated decisions — regulatory and compliance gaps
- **Institutional-level governance** typically inaccessible to smaller trading operations

2. Our Solution

OMNIX is Decision Governance Infrastructure that validates every automated decision through 6 independent checkpoints before execution, with a fail-closed architecture that defaults to protecting capital.

Checkpoint	Function
1. Probability Check	Simulates thousands of scenarios; blocks if likely to lose
2. Risk Limits	Enforces drawdown caps and portfolio risk boundaries
3. Signal Agreement	Multiple independent models must agree before action
4. Trend Confirmation	Requires sustained edge for 3 consecutive cycles
5. Stress Test	Real-time tail risk and crash probability detection
6. Logic Check	Blocks if internal signals contradict each other

Every decision (executed or blocked) is cryptographically signed with NIST-standardized post-quantum algorithms and stored with a full audit trail.

3. Traction & Key Metrics

OMNIX has been running in production 24/7 since November 2025. All metrics represent real system telemetry, not projections:

Metric	Value	Context
Production Uptime	24/7 since Nov 2025	4+ months continuous operation
Evaluation Cycles	670,000+	Governance engine operational in real-time
PQC-Signed Receipts	16,000+	100% post-quantum coverage
Capital Preserved	98.5%	During BTC -7.37% volatility
Decision Latency	<120ms	Real-time governance validation
P&L; Reconciliation	100%	Mathematical audit: 119/119 trades verified
Execution Integrity	Kraken-verified	Real exchange fill data, not estimated
Combined TAM	\$49.7B+	6 verticals addressable

Note: All metrics from internal dataset, not externally audited. Evaluation cycles represent governance engine activity.

4. Product & Technology

Feature	Status	Description
6-Checkpoint Governance	Live	Multi-layer pre-execution decision validation
Post-Quantum Cryptography	Live	NIST-standardized PQC signing (since Nov 2025)
Public Verification Server	Live	Receipt verification with zero internal data exposure
Shadow Portfolio Engine	Live	670,000+ counterfactual events; veto accuracy validation
Execution Integrity	Live	Kraken fill reconciliation; real exchange data verification
Multi-AI Orchestration	Live	Gemini 2.5 Flash + GPT-4o + Claude with failover
Investor Dashboard	Live	19 widgets, real-time metrics, dual win rate framework
Interactive Demos	Live	Credit/Lending + Insurance governance demos
Enterprise API	Planned	Risk Guardian API (Q2 2026)

Layer	Technology
Core Engine	Python 3.11 Hexagonal architecture 42+ DB tables
Frontend	React 18 + TypeScript + Tailwind CSS + Vite
Database	PostgreSQL (90% FK coverage) + Redis
AI Models	Google Gemini 2.5 Flash, OpenAI GPT-4o, Anthropic Claude
Cryptography	NIST-standardized post-quantum signing (operational since Nov 2025)
Infrastructure	Railway (production 24/7), Replit (development)

5. Market Opportunity

Vertical	Addressable Market	Timeline
Digital Asset Trading	\$18.8B algorithmic trading	Now (Validated)
Supply Chain Risk	\$3.2B supply chain analytics	Year 2–3
Credit / Lending Governance	\$7.4B credit risk management	Year 2–3
Insurance Underwriting	\$5.1B insurtech	Year 3+
Energy Trading	\$2.8B energy risk management	Year 3+
Robotics / Autonomous Systems	\$12.4B industrial robotics safety	Year 3+
Combined TAM	\$49.7B+	Progressive

Target Geography: ADGM/DIFC (Abu Dhabi/Dubai) — 200+ prop trading firms, 100+ regulated funds.
Expansion: EU (MiCA), Asia-Pacific (Year 2–3).

6. Competitive Advantage

Feature	OMNIX	3Commas	Gauntlet	Internal Quant
Decision Checkpoints	6 independent	1 (SL/TP)	2–3	2–4
PQC Security	Yes (NIST)	No	No	Rare
Multi-Vertical	6+ verticals	No	DeFi only	No
Audit Trail	16,000+ receipts	No	Limited	Proprietary
Fail-Closed	Yes (default)	No	No	Variable
Public Verification	Live	No	No	No
Pricing	\$15K–\$35K/mo	\$49–\$79/mo	Enterprise	\$1M+/yr team

USP: First domain-agnostic Decision Governance Infrastructure with production PQC, 6 independent checkpoints, and publicly verifiable decision audit trail.

7. Business Model & Unit Economics

Product	Pricing	Target Customer
Risk Guardian API	\$15K–\$35K/month	Prop firms, trading platforms
White-Label Engine	\$100K+ setup + \$20K/month	Exchanges, brokers
Per-Validation API	\$0.01–\$0.05/call	High-volume platforms
B2C Pro SaaS	\$149/month	Advanced independent traders
B2C Advanced SaaS	\$499/month	Semi-professional traders

Metric	Value
CAC (Enterprise)	\$5,000–\$10,000
LTV (Enterprise)	\$180K–\$420K
LTV/CAC Ratio	18x–84x
Gross Margin	60–70%
Break-Even	18–24 months

"Institutions pay for what blocks bad decisions, not for alpha. License-based revenue. No tokens. No performance fees."

8. Go-To-Market Strategy

Enterprise-first GTM targeting ADGM/DIFC ecosystem where MiCA compliance urgency creates immediate demand for decision governance infrastructure.

Stage	Action	Timeline
Awareness	50 direct outreaches/month + events	Ongoing
Assessment	Free governance health check	Week 1–2
Shadow Mode	OMNIX runs alongside (no execution)	2–4 weeks
Advisory Mode	Pre-execution recommendations	2–4 weeks
Enforcement	Full governance with veto authority	Ongoing
Paid License	Monthly enterprise license	Month 3–6

Phase	Focus	Timeline
Phase 1	3 enterprise pilots (digital assets)	Months 1–6
Phase 2	Regional expansion (ADGM/DIFC/MENA)	Months 6–12
Phase 3	Multi-vertical: supply chain, lending, robotics	Months 12–24
Phase 4	Global: EU MiCA, Asia + insurance, energy	Months 24–36

9. Team

Harold Nunes — Founder & CEO

- Built OMNIX end-to-end: concept to production system running 24/7
- Deep domain expertise in algorithmic trading, decision systems, cryptographic security
- Lean architecture designed for scalability; AI-assisted development reduces burn while maintaining velocity
- Designed 6-checkpoint governance architecture, PQC integration, multi-vertical adapter pattern

Key Hires Planned (Post-Funding)

Role	Timeline	Purpose
Senior Backend Engineer	Month 1–2	Enterprise API, system scaling
DevOps / Infrastructure	Month 2–3	Production reliability, automation
Business Development	Month 3–4	Enterprise sales, ADGM relationships

Key-Person Risk Mitigation: 27 ADRs, hexagonal architecture, 2–3 week onboarding target. First 3 hires reduce founder dependency from 100% to ~30% by Month 4.

10. Financials & The Ask

	Year 1	Year 2	Year 3
Enterprise Clients	3 pilots	5–8 licenses	15–30 licenses
B2C SaaS Users	50–100	500–1,000	2,000–5,000
Revenue	\$200K–\$400K	\$800K–\$1.2M	\$2M+
Gross Margin	60–70%	65–75%	70–80%

Item	Details
Raising	\$500,000 USD
Equity	16.7%
Pre-Money Valuation	\$2.5M–\$3M
Bootstrapped	\$0 raised to date
Stage	MVP (Live Product)
Runway	18+ months to Series A

Category	Allocation	Purpose
Strategy & Risk Engine	35%	Algorithm refinement, enterprise API
Dubai/ADGM Legal	25%	Company formation, regulatory structure
Enterprise Infrastructure	20%	API, security certifications, scaling
Team & Operations	15%	3 key hires (Month 1–4)
Reserve	5%	Contingency

11. Roadmap

- **Q1 2026 (Current):** Complete track record validation. Eureka GCC competition. Execution Integrity v1 (Kraken fill verification). Mathematical audit (100% P&L; reconciliation).
- **Q2 2026:** Enterprise API launch (Risk Guardian). First enterprise pilot. ADGM regulatory structure initiated.
- **Q3 2026:** Public license model. White-label SDK. Second and third enterprise clients.
- **Q4 2026:** Series A readiness. Multi-vertical domain adapter development begins.
- **2027:** Series A (\$5M target). Global expansion (EU MiCA, Asia). Multi-vertical scaling.

Key Milestones Achieved

Date	Milestone
Nov 2025	Post-quantum cryptographic signing — production
Nov–Dec 2025	Learning Baseline: 119 trades, system calibration
Jan 15, 2026	Official Track Record Day 1 (calibrated parameters)
Jan 28, 2026	Institutional website launched (omnixquantum.net)
Feb 15, 2026	Multi-vertical demos: Credit/Lending + Insurance
Feb 21, 2026	Public Verification Server deployed
Feb 24, 2026	Execution Integrity v1: Kraken fill reconciliation
Feb 24, 2026	Mathematical Audit: 119/119 trades P&L; verified

All financial performance metrics are calculated from database-verified P&L including exchange fees. See Mathematical Audit Report.

OMNIX — Decision Governance Infrastructure for Automated Systems

"When systems can act, but choose discipline."
